

iSERIES OPERATIONS WORKSHOP II (ATS02)

Course Description:

Enhance your skills as an iSeries operator/administrator and develop skills in the areas of availability and recovery, and advanced system administration. Learn how to use features of the i5 (iSeries, AS/400) system to better manage disk usage, security and backups. Learn about the graphical tools available in OS/400 to help with server administration. Understand availability functions built into i5/OS and how to choose which functions are appropriate for your system.

Duration: 3 Days (instructor led classroom).

Audience: Operators, administrators, and IT professionals who are interested in gaining a more extensive understanding of OS/400, the iSeries operating system.

Course Objectives

- Describe OS/400 availability features and understand how each is implemented
- Learn how to use OS/400 disk administration tools to manage disk capacity
- Understand how to backup and recover your system
- Develop a backup and recovery plan for your installation
- Learn administration tools in the GUI interface, such as collection services and performance monitors

Course Prerequisites:

Working experience with i5/OS (OS/400) Navigator and 'green screen' interfaces. These skills can be developed through the successful completion of iSeries Operations Workshop I (IT01) class, or equivalent knowledge.
